\*1 Measurement, measuring conditions, and method of notation all comply with ISO/IEC 21118: 2020 international standards. Value is average of all products when shipped.  
 \*2 Average light-output value of all shipped products measured at center of screen in NORMAL Mode.  
 \*3 Around this time, light output will have decreased by approximately 50%. IEC62087: 2008 Broadcast contents, NORMAL Mode, Dynamic Contrast [3], under conditions with 30°C (86°F), 700m (2,297ft) above sea level, and 0.15 mg/m<sup>3</sup> of particulate matter. Estimated time until light output declines to 50 % varies depending on environment.  
 \*4 Lens shift is not supported on the ET-DLE055, and the optical axis is fixed with the ET-DLE035.  
 \*5 Only dot clock frequency 27MHz (Pixel Repetition signal) is supported.  
 \*6 4K/60p signals are converted to the projector's resolution (1920 x 1200 pixels) upon projection. Supported terminals: DIGITAL LINK/HDMI®.  
 \*7 With legs at shortest position.  
 \*8 Average value. May differ depending on the actual unit.  
 \*9 When using the projector at an altitude lower than 2700m (8 858 in) above sea level, and the operating environment temperature becomes 30°C (86°F) or higher, the light output may be reduced to protect the projector. When using the projector at an altitude between 2700m (8858 in) and 4200m (13780 in), and the operating environment temperature becomes 25°C (77°F) or higher, the light output may be reduced to protect the projector.

- The value for L (distance to screen) varies slightly within  $\pm 5\%$  depending on the zoom lens characteristics.
  - The zoom lens characteristics may cause slight image distortion.
  - When using keystone correction is used, the image is corrected in the direction that reduces its projected size.
  - The brightness varies depending on the zoom setting.
- \*When the ET-DLE055 is mounted, the optical lens shift function cannot be used.

**Standard setting-up position (If using the ET-DLE035)**

Illustrations show the projector installed using optional ceiling mount bracket ET-PKD120H, optional bracket assembly ET-PKD130B and an optional lens.

unit : mm (inch)  
 NOTE: This illustration is not drawn to scale.  
 \*1 Continuous height adjustment possible.

**Caution**

- All construction work should be done by a qualified technician.
- When mounting to the ceiling, use the special mounting bracket.  
 Furthermore, in order to prevent it from falling down from the ceiling, use the supplied wire on the mounting bracket.

- The value for L1 may contain an error of within ±5%.
- When using keystone correction, the images will be corrected so that they will tend to be smaller than the specified screen size.
- This measurement is not the distance between the rear of the projector and the wall, but is instead the distance between the rear of the projector and the screen surface. Leave at least 500 mm of space between the rear of the projector and the wall and any other objects in order to provide adequate ventilation space. If setting up the projector in a closed room, be sure to provide separate air conditioning and ventilation equipment. If there is insufficient ventilation in the room, radiated heat may build up and cause the protection circuit of the projector to operate.

**Formula for calculating possible heights when using the ET-DLE035**

If using a screen size which has not been previously mentioned, use the following calculation formulas to obtain the possible setting-up height.

Screen aspect ratio 16:10      Possible setting-up height A1 (mm) = Projection screen size (inches) x 5.0-72.1  
 Possible setting-up height A2 (mm) = A1 + 200

Screen aspect ratio 16:9      Possible setting-up height A1 (mm) = Projection screen size (inches) x 5.9-72.1  
 Possible setting-up height A2 (mm) = A1 + 200

Screen aspect ratio 4:3      Possible setting-up height A1 (mm) = Projection screen size (inches) x 5.7-72.1  
 Possible setting-up height A2 (mm) = A1 + 200

**Lens shift range**

• The ET-DLE055 has a fixed short-focus lens. Therefore, the lens shift function provided in the main unit cannot be used.

**Installable angle**

Install the projector at an angle within the range shown below.

**FULL 360-degree projection**

**Notes on projector placement and operation**

- Prevent hot and cool air from the air conditioning system to blow directly to the ventilation ports (intake and exhaust) of the projector.
- Do not stack projectors on top of each other.
- Do not block the ventilation ports (intake and exhaust) of the projector.

- Do not install the projector in a confined space. When installing the projector in a confined space, provide air conditioning or ventilation separately. Exhaust heat may accumulate when the ventilation is not enough, triggering the protection circuit of the projector.

**List of compatible signals**

The following table specifies the video signals compatible with the projector. For details of SDI signal, refer to “List of single link SDI compatible signals”.

This projector supports the signal with ✓ in the compatible signal column.

\*1 Pixel-Repetition signal (dot clock frequency 27.0 MHz) only

\*2 The signal with 1/1.001x vertical scanning frequency is also supported.

\*3 YPbPr 4:2:0 format only

\*4 VESA CVT-RB (Reduced Blanking)-compliant

\*5 Samples the pixels in the image processing circuit and projects the image.

**Note**

- A signal with a different resolution is converted to the number of display dots. The number of display dots is 1920 x 1200.
- The “i” at the end of the resolution indicates an interlaced signal.
- When interlaced signals are connected, flickering may occur on the projected image.

**List of plug and play compatible signals**

The following table specifies the video signals compatible with plug and play.

Signal with ✓ in the plug and play compatible signal column is the signal described in the EDID (extended display identification data) of the projector.

For the signal without ✓ in the plug and play compatible signal column, the resolution may not be selected on the computer even if the projector is supporting it.

• Input corresponding to each item in the plug and play signal column is as follows.

\*1 Pixel-Repetition signal (dot clock frequency 27.0 MHz) only

\*2 The signal with 1/1.001x vertical scanning frequency is also supported.

\*3 YPbPr 4:2:0 format only

\*4 VESA CVT-RB (Reduced Blanking)-compliant

\*5 Samples the pixels in the image processing circuit and projects the image.

**Note**

- A signal with a different resolution is converted to the number of display dots. The number of display dots is 1920 x 1200.
- The “i” at the end of the resolution indicates an interlaced signal.
- When interlaced signals are connected, flickering may occur on the projected image.
- When the DIGITAL LINK connection is made with the long-reach communication method, the signal that the projector can receive is up to 1080/60p (1920 x 1080 dots, dot clock frequency 148.5 MHz).
- Even if it is the signal listed in the list of compatible signals, it may not be displayed by the projector if the video signal is recorded in a special format.
